

US and Canada Aborted Fetal Vaccines : In Pediatric Immunization Schedule Format

As of November 2009

X Indicates age vaccine is normally given. **F---T** (**F**rom and **T**o) Indicates range of ages when vaccine or boosters are normally given.

- Indicates Catch-up Date if not previously vaccinated
- Indicates Additional Doses for those at High Risk
- Indicates Aborted Fetal Vaccines

Data on Vaccine Schedules is as of November 2009
For Further Information Visit The CDC Website at:
<http://www.cdc.gov/vaccines/recs/schedules/child-schedule.htm>

Vaccine (Number of Doses)	Birth	1-2 Mos	4 Mos	6 Mos	12 Mos	15 Mos	18 Mos	19-23 Mos	2-3 Yr	4-6 Yr	7-10 Yr	11-12 Yr	13-18 Yr	Adult
Hepatitis-B (3)	X	X		F ← → T										
Rotavirus (3)		X	X	X										
DTaP (5)		X	X	X		F ← → T				X				
HiB (4)		X	X	X	F ← → T									
Pneumococcal (4)		X	X	X	F ← → T									
Polio (4)		X	X	F ← → T						X				
Flu/H1N1 (Annually)				F ← → T										T
M-M-R (2)					F ← → T					X				
Varicella/Chickepox (2)					F ← → T					X				
Hepatitis-A (2)					F ← → T									
Meningococcal MCV										F ← → T		X	X	
Rabies As Required														
Shingles/Zostavax														X

Aborted Fetal Version	Fetal Cells	Abortion Not Involved		
Polio: Poliovax, Pentacel, DT Polio Adsorbed, Quadracel - Sanofi	MRC-5	IPOL – Separate dose Sanofi (Vero Cells)	Pediatrix: DTaP+Polio+Hep-B (GSK)	DTaP + Polio (All products) (Vero Cell Line)
MMR II, Meruvax, Priorix, MR Vax, Eolarix, Biavax – Merck, GSK	RA273 WI-38	Rubella: None in USA, Canada	Measles Only: Attenuvax - Merck (Chick egg)	Mumps Only: Mumpsvax Merck (Chick egg)
Varivax, Varilix – Merck, GSK Proquad*, MMR-V* - Merck	MRC-5, RA273,WI-38	Chickenpox None in USA, Canada	<p>Note: Immune Globulin (IG) Products Provide Temporary immunity For Hepatitis-A: 4 to 6 months and Rubella: 3 months</p> <p>Physician Order Line: Merck: 800-422-9675 GSK: 866-475-8222 Chiron: 800 244-7668 (PST) Sanofi Pasteur: 800 822-2463</p>	
Hepatitis-A: Vaqta, Havrix, Avaxim, Epaxal, Vivaxim - Merck, GSK, Sanofi Hepatitis A-B combo: Twinrix - GSK	MRC-5	Hepatitis-A None in USA, Canada		
Rabies – Imovax – Sanofi	MRC-5	RabAvert Chiron (Chick egg)		
Shingles/Zostavax - Merck	MRC-5	None in USA, Canada		

Current Trends

Because the pharmaceutical industry perceives public acceptance of the current vaccines, they continue to utilize both existing and new aborted fetal sources. The latest is a new fetal cell line, PER C6, by Dutch pharmaceutical, Crucell, using the retinal tissue of an 18-week gestation baby, made specifically for vaccine development.

In Development: Using PER C6

Vaccines for Flu, Avian Flu, Swine Flu, Ebola, TB, Marsburg Disease, Hepatitis-C, HIV – and Veterinary medicines.

Beyond Vaccines...

Products for diseases such as rheumatoid arthritis, cystic fibrosis and severe sepsis are also produced using aborted fetal cell lines.

Product	Fetal Cell	Alternative
Enbrel	WI-26	Humira
Pulmozyme	HEK-293	None
Xigris	HEK-293	None

Neocutis – Anti-aging creams

Produced using the remains of a 14 wk gestation baby aborted in Switzerland.

Senomyx Food Enhancers

Tests their artificial food additives using HEK-293 aborted fetal cell line.

WHEN DO WE SAY ENOUGH IS ENOUGH!

Unless the public refuses to tolerate this senseless exploitation of our unborn, it will only worsen. We were successful with our smallpox campaign in demanding an ethical alternative and we must continue this sort of pressure on the industry and government.

Time to awaken the sleeping giant!

The Vatican Agrees (PAFL 2005)

“Doctors and fathers of families have a duty to take recourse to alternative vaccines...putting pressure on the political authorities and health systems so that other vaccines without moral problems become available. They should take recourse, if necessary, to the use of conscientious objection with regard to the use of vaccines produced by means of cell lines of aborted human foetal origin. Equally, they should oppose by all means in writing, through the various associations, mass media, etc., the vaccines which do not yet have morally acceptable alternatives, creating pressure so that alternative vaccines are prepared, which are not connected with the abortion of a human foetus, and requesting rigorous legal control of the pharmaceutical industry producers.” (PAFL, June 2005)

AVM Biotech Responds!

It is AVM Biotech along with Sound Choice Pharmaceutical Institute’s goal to provide ethical alternatives for those products that currently have no moral option. Further, they will certify like-minded company products with a “Pro-Life Produced” seal to enable choices among consumers.

Vaccines From Abortion Hidden Truth

For over 40 years vaccines have been produced using the remains of aborted babies, a fact kept carefully hidden from the general public for decades. As the grisly details have emerged in recent years, many parents and physicians are deeply disturbed to learn the truth surrounding these vaccines – and rightfully so! What follows is just the tip of the iceberg!

During the 1964 rubella epidemic some US doctors advised rubella-infected pregnant women to abort their children, in fear their child might be born with birth defects. Working with the doctors,

Wistar researchers (Philadelphia) collected the live fetal tissue. Ultimately, they extracted the virus from the 27th aborted baby’s kidney, labeling it RA273. (R=Rubella, A=Abortus, 27=27th abortion, 3=3rd tissue explanted) This virus was then cultivated on WI-38 cell line produced in their labs from the lung tissue of a 3-months gestation female baby, electively aborted in Sweden, then exported to Wistar. There would be over 70 elective abortions before perfecting the rubella vaccine.

Ten years later UK scientists developed MRC-5, from the lung tissue of a male baby aborted at 14 weeks gestation. These two fetal cell lines and others are used today to cultivate weakened virus strains of several diseases to produce vaccines.
